[1] A cancer incidence rate is the number of new cancers of a specific site/type occurring in a specified population during a year, usually expressed as the number of cancers per 100,000 population at risk. Because of the low number of new cases, incidence is expressed as the number per one million population at risk in this report.

[1] Age-adjusted to the 2000 US Standard Population (19 age groups - Census P25-1130).
